

Driver Safety

Backing up:

- Do a walk-around inspection before backing up, noting obstructions, pedestrians, bike riders, etc.
- Know your blind spots and how far the bumper sticks out.
- Do not rely on only your mirrors when backing up—turn completely around and look out the rear window.
- Back up at a very slow speed—you will have more control.
- Do not try to squeeze your vehicle into a space that is too tight.
- If you are in doubt at any time when backing up, get out and make another inspection.
